## Stock Market Summary

from eBook 4th January:>> Last week was volatile and saw a sharp rally putting the major index ETFs back in a much stronger price location. Can this be sustained?  
Positives: 1) Stronger price location. 2) There was no obvious increase in bullish sentiment with the rally although VIX collapsed last week. 3) LT Breadth is supportive.

Negatives: 1) Big gaps up on the major index ETF charts, the majority of the time these are filled. 2) Market is overbought e.g. Nyse %stocks>50dyma is well above 80. 3) Possible negative is the Supporting charts which are not conclusively supportive.<<

from eBook 18th January:>> Although the market is overbought both the LT and ST analysis is supportive. First indication of weakness would be Significant Sellers marked below ES 1453. Sentiment shows extreme complacency, not quite extreme optimism, e.g. VIX closed below 13 for the first time since 2007. But it was interesting that my version of the Rydex Assets Ratio ended the week at 3.63, down quite a bit<<

from eBook 29th March:>>LT analysis remains positive. Breadth is supportive although %Stocks>50dyma numbers are lower than they were at the February price peak so there is divergence here. Sentiment indicators showed an overall increase in Bearishness last week but some have recently been peaking in optimism. First sign of weakness on the longer timeframe would be Significant Selling marked below ES 1517.50, the 3mn poc.<<

from eBook 5th April

>>Breadth is mixed with the R2000 Market Chart turning neutral and the Nasdaq %Stocks>50dyma number falling below 50 (see below). Most index ETF charts closed the

week above Wednesday's low so this does not indicate a bias on the weekly timeframe. I have not marked Sellers Active on this timeframe so far in 2013. There was weakness last week but technically there has yet to be a breakdown.<<

from eBook 12th April

>>The last three days held higher prices which is encouraging but there are some negatives. The minor pattern of Support off previous day's poc was broken on Friday; there is a negative divergence between higher prices and Price Osc, s...and Small Caps are lagging the Larger Cap indices<<

from eBook 26th April

>> Last week saw an improvement in price location with ES and the four major index ETFs ending the week above their 1/2R levels off recent high. ...The most recent imbalance is the Significant Buying marked last Monday so new short trades have been eliminated for me since the Open on Tuesday.<<

from eBook 24th May

>>ES Analysis: Last week I marked Significant Selling once and no Significant Buying. Friday generated an overlapping/lower, narrower Value Area. First Level Support at 1626 has held. Significant Selling marked below this level would be an indication of weakness on the longer timeframe. Bulls would hope the Support holds.<<

\*\*\*\*\* PRICE PERFORMANCE / LOCATION

SPY closed on Friday below Mon-Wed Hi-Lo range which indicates Sellers Active on the weekly timeframe. Previous two weeks also indicated no bias. Three weeks ago Sellers were marked as active on this timeframe for the first time this year.

ES Analysis: from pre-open today. Last week I marked Significant (Aggressive) Selling twice and no Significant Buying. Thursday and Friday generated Value Areas below the 3mn poc at 1628. Sellers in control of the dayframe. ES has next Support at the 11mn poc at 1548. Price below this level would be very weak location.

Next Level ETF Support as follows: SPY 155.80; DIA 144.24; QQQ 68.62; IWM 93.62.

Supporting Charts:

Bonds TLT: Has today (Monday) has printed its lowest level since Sep 2011.

Oil USO: Printing below the 34.20 area of S/R. Momentum is positive but has turned down.

Gold GLD: Last week printed its lowest level since Sep 2010.

Silver SLV: Last week printed its lowest level since Sep 2010.

Dollar Index: Held maj Support which is the major poc at 80.15. Momentum is negative but up.

EURUSD: Momentum is positive but has turned down and today (Monday) is testing minor Support at 1.3081, 1/2R off April low.

\*\*\*\*\* BREADTH

CP Market Timing System turned negative (from neutral) for Nyse and R2000; turned neutral (from positive)for Nasdaq and remained negative for UK.

%Stocks>50dyma numbers: Nyse 35%, Nasdaq 54%, R2000 53%, UK25%. Numbers >50 are considered supportive. Numbers >80 are considered overbought.

04/19: QQQ found Support at the 15mn

SP500 Index (Weekly) + AAI (public) poll

05/24: AAI (public poll). Bulls% was sharply higher at 49% (from 38.5%). Bears% was lower at 21.6% which is the lowest since February 2012. The ratio of Bulls to Bears is therefore 2.3, this is the highest since February 2012 and historically is a very high number.

06/21: AAI (public poll). Bulls% was higher at 37.5% from previous week's 33% . Bears% was lower at 30%, from 34.6%. The nett is therefore higher at 7.5. So an increase in retail bullish sentiment for the second week when market has been down. This is not usually bullish.
